New trends in the energy sector

What is GFA's expertise?

GFA Consulting Group is one of the leading European consulting firms in the development cooperation sector. For over 40 years, we have provided consulting services in over 130 countries from our headquarters in Germany. Africa has always been a key region for us. We conduct complex studies and projects on behalf of leading development agencies, ministries, and governmental agencies. Our expertise covers many areas that are crucial for sustainable development in Africa.

What is GFA's contribution to the energy sector transformation in Africa?

Under our Climate & Energy Cluster, we implement sustainable energy projects along the value chain – from generation to consumption. We have gathered expertise, knowledge, and skills to deal with complex challenges in the energy sector thus helping African countries supply their people with clean and affordable electricity.

What are the new trends in the energy sector?

Digitalisation has long become an essential consideration in the energy sector. Currently, approximately 70% of our projects have digital components. The production and use of green hydrogen will be a game changer in the energy sector (see H2Global Advisory, a company of GFA Group: www.h2-global.de). At GFA, we are building competencies in this topic, which has become an integral part of our portfolio.
